Forecast for Thursday 06 Jun 2024

Weather: Cloudy with residual showers at first, the cloud breaking up through the morning to give sunny spells and isolated showers through the day, generally light. Further cloud pushing in from the west in the evening.

Chance of cloud-free hill tops above 800m: 70% at first, rising to 90% by midday.

Low Cloud and visibility: Poor locally initially with cloud covering summits, bases as low as 500m, most likely across western slopes. This breaking and lifting through the morning, with cloud above the peaks from late morning onwards. Visibility generally very good all-around, except in and around any showers.

Freezing Level*	1200m	1200m	1200m	1300m	1400m	1500m	1400m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Feeling rather unseasonably cold on the peaks through much of the day, so extra clothing needed. Conversely, UV levels will be high throughout the day, so sun protection also required.

Forecast for Friday 07 Jun 2024

Weather: After a bright sunny start, cloud is expected to move in from the northwest through the morning in association with a band of showery rain. Cloud and rain lingering through much of the day over western exposures, however eastern areas likely seeing their share of sunnier spells. Blustery and feeling cool.

Maximum wind: Westerly 20-25mph with gusts 30-35mph.

Chance of cloud-free hill tops above 800m: 60% for western slopes early, rising to 90% into the afternoon.

Low Cloud and visibility: Cloud down to 600m for western exposures during the early morning, rising during the day to be mostly above the peaks, but some cloud down to 800m likely lingering in the west. Visibility generally good, falling to poor or very poor in low cloud and showers.

Temperature: **Valleys:** Plus 10 Celsius, rising to Plus 14 Celsius.
At 800m: Plus 3 Celsius, rising to Plus 6 Celsius.
Freezing level: Above summits.
